Construction management system using Internet accesses database server to examine and recognize worker entry into room based on construction and workers rating authorization information stored in database server

NTT COMMUNICATIONS KK 2000.09.04 2000JP-266907

T05 (2002.03.08) E04G 21/00, G06F 17/60, G07C 9/00

Novelty: A data terminal (21) of a construction bidder terminal (20) registers the construction information and associated workers rating authorization information to a database server (1) through Internet (40). A data terminal (13) of a construction orderer terminal (10) accesses the database server to examine and recognize the worker's entry into a room in the objective building, based on the construction and rating authorization information.

Use: For managing construction orders using Internet.

Advantage: Appropriately performs the construction management and recognizes the worker's rating and work description based on the construction and associated worker's rating authorization information.

Description of Drawing(s): The figure shows the block diagram of the construction management system. (Drawing includes non-English language text).

Database server 1

Construction orderer terminal 10
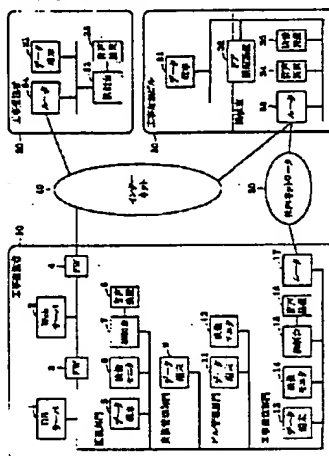

Data terminals 13,21

Construction bidder terminal 20

Internet 40
